

Contents:

• 1 Strike4 unit (Tray & Grid) • 21 Red tokens • 21 Yellow tokens

Assembly/Setup: (see Illustrations)

Slide the grid unit horizontally outward.

Tilt the grid 90 degrees vertically such that the grid is in a standing position.

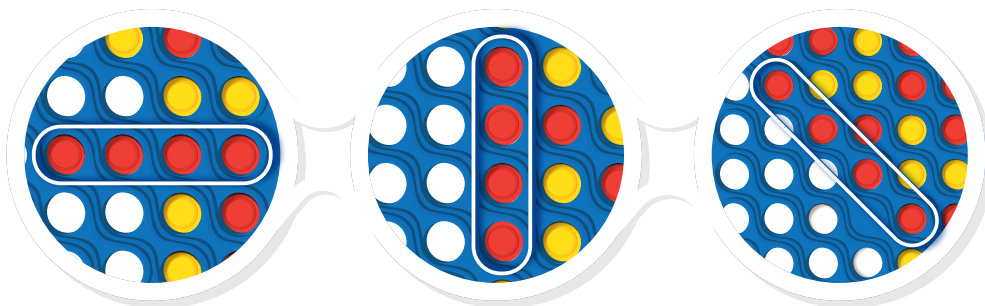

The grid will firmly attach itself to the two projections automatically on the either side of the tray.

To clear the grid of the tokens, simply lift the grid upward and swing at an angle (see illustration) and the tokens will fall out.

Objective:

Be the first player to get four of your tokens in a row – horizontally, vertically or diagonally.

How to play:

1. Choose who plays first. The player starting the first game will be the second player in the next game.
2. Each player picks 21 tokens of one colour.
3. Each player in his turn, drops one of his tokens down any of the slots at the top of the grid.
4. The play alternates until one of the players gets FOUR tokens of his colour in a row. The four in a row can be either horizontal, vertical or diagonal.
5. The first player to get four in a row wins.
